## Introduction

As a sustainability specialist, I have been involved in a variety of industry responsibilities, such as implementing energy-saving technologies, passive design strategies, and managing building services to ensure both energy efficiency and occupant satisfaction. Additionally, I have focused on carbon impact through reducing construction waste in materials, which is a crucial aspect of creating a sustainable future. Through extensive collaborations with researchers in Australia and internationally, I have improved my communication skills and ability to synthesize various ideas with scholars, practitioners, and project supervisors regarding the development of energy-efficient and sustainable buildings.

Currently, I am leading computational design efforts towards task automations and app developments in sustainability at Stantec. I assess a wide range of projects for their energy/daylight performance based on Australian building codes, including Section J and the Green Star rating scheme.

## Education

2018-2021	<b>Doctor of Philosophy (PhD) in Architecture &amp; Built Environment</b> Deakin University, Australia
Thesis Topic	Towards a simulation-based operation of non-conventional adaptive facades in shared spaces – A Personalized Real-time Control (PRC)
Details	<ul style="list-style-type: none"><li>• This thesis aims to propose an innovative controlling approach as a proof-of-concept to personalize non-conventional adaptive façade incorporating individual preferences and energy saving potentials, based on simulations in a shared office environment.</li></ul>
Outcome	<ul style="list-style-type: none"><li>• The developed personalized real-time control strategy compared with two typical automated shading control strategies where the results showed significant improvement in occupants' visual comfort performance and energy savings by 61% and 29%, respectively.</li></ul>
Supervisors	<ul style="list-style-type: none"><li>• Dr. Astrid Roetzel, Dr. Hong Xian Li, Prof. Aris Tsangrassoulis</li></ul>
2012-2015	<b>Master of Science (MSc) in Architectural Engineering</b> Polytechnic University of Milan (POLIMI), Italy
Thesis Topic	<ul style="list-style-type: none"><li>• Innovative Bio-climatic European School Complex in Crete, Greece</li></ul>

Details	<ul style="list-style-type: none"> <li>• The thesis aims to criticize environmental aspects of a school in Heraklion, Crete Island, Greece and recommends practical energy-efficient principles and details inspiring from its context and passive strategies towards a bio-climatic design.</li> </ul>
Outcome	<ul style="list-style-type: none"> <li>• <a href="https://www.youtube.com/watch?v=olUckZcuRvw&amp;t=105s">https://www.youtube.com/watch?v=olUckZcuRvw&amp;t=105s</a></li> </ul>
Supervisors	<ul style="list-style-type: none"> <li>• Prof. Gabriele Masera, Prof. Massimo Tadi, Prof. Angela Colucci</li> </ul>
GPA	<ul style="list-style-type: none"> <li>• 108/110</li> </ul>
2007-2011	<b>Bachelor of Science (BSc) in Architectural Engineering</b> Azad University of Mashhad, Iran
Thesis Topic	<ul style="list-style-type: none"> <li>• Designing a Commercial-Residential Complex: The Case of a Temporary Residency</li> </ul>
Supervisors	<ul style="list-style-type: none"> <li>• Mr. Mohsen Mousavi</li> </ul>
GPA	<ul style="list-style-type: none"> <li>• 17.35/20</li> </ul>

## **Work Experience**

### 2021-now **Ph.D. Researcher**

As part of my hobbies, I publish academic articles to keep my knowledge up to date with specific research interests including:

- Human-centered control design of building interfaces
- Personalized control systems in shared spaces using wearable devices
- Web-based application/software developments/programming
- Computational and parametric design impacts on building performance
- Artificial intelligence integration into occupant behavior modelling and predictions
- Sophisticated building performance simulation (e.g., smart control programming)
- Prefabricated modular constructions

### 2022-now **Computational Design Lead**, STANTEC, Brisbane, Australia

My Responsibilities:

- Leading the implementation of computational and generative design workflows Grasshopper and Ladybug-Tools interfaces
- Supporting use of Grasshopper and Dynamo and Python programming language
- Sustainability Data Analyst
- Training team members across Stantec offices in Australia

Achievements:

- Developing an in-house “EPW Visualizer Toolkit” to analyse the weather file and generate analytical reports as part of our deliverables
- Insulation markup automation through an in-house application
- Implementing new workflows to accelerate the building energy modelling procedures massively through a new tool, Pollination, for Stantec offices globally
- Conducted training sessions on energy/daylight modelling workflows using Ladybug-tools within the Grasshopper environment

### 2021-now **Sustainability Consultant**, STANTEC, Brisbane, Australia

My Responsibilities:

- Leading innovative parametric energy/daylight/glare simulation algorithms aligned with Australian National Construction Code (NCC 2019) and Green Star rating scheme using Grasshopper and Ladybug-Tools interfaces
- Conducting building energy performance calculations including GHG emissions, and thermal comfort analysis based on Section J of the NCC2019 regulations
- Collaborating effectively with other engineering disciplines to ensure meeting the project deadlines
- Interpreting sustainability data and providing insights to inform business decisions

**Achievements:**

- Conducted building fabric optimisation studies to provide clients and architects with preliminary insights into various design options
- Assessed the energy performance of over 10 large-scale projects including warehouses, schools, universities, and offices, to ensure compliance with NCC2019 and/or GreenStar schemes
- Conducted highly detailed HVAC system simulations such as evaluating the indoor environmental quality based on CO2 sensors at a university scale or assessing the impact of outdoor fresh air flow rate/filter changes on energy consumption at a hospital scale
- Utilized advanced technical parametric modelling/scripts to improve the indoor visual comfort performance, such as glare risk assessment in swimming pools
- Developed advanced control scenarios for mixed-mode buildings using IES-VE modelling software

2021-now **Research Assistant**, DEAKIN University, Geelong, Australia

**Subject: Unlocking Geothermal Energy Utilization for High-performance Buildings**

This research is conducted through a collaboration with the Plumbing Industry Climate Action Centre (PICAC) in Melbourne as the premier 'Centre of Excellence' in training for the industry. (<https://www.picac.edu.au/about-us>)

**My Responsibilities:**

Optimizing the existing PICAC geothermal heat pumps through an integrated simulation-based workflow in addition to validating the results with monitored data

An active collaboration on writing a Q1 research paper (Under-review in Scientific Report Journal, NATURE Publisher)

2021 **Research Assistant**, DEAKIN University, Geelong, Australia

**Subject: Circular Economy Through Modular Construction: Developing Innovative Cellular Flooring System**

An industrial collaboration between Form Flow and Deakin University as an ARC linkage project.

**My Responsibilities:**

Analysing the building energy performance by applying a newly-introduced cellular flooring prototype for Australian construction market

2020-2021 **Teaching Assistant**, DEAKIN University, Geelong, Australia

**Subject: Building Environmental Studies (SRT257)**

#### My Responsibilities:

Analysing the building energy performance by applying a newly-introduced cellular flooring prototype for Australian construction market

2015-now **Co-Founder and Sustainability Consultant**, UPGREENGRADE CO., Mashhad, Iran  
([www.upgreengrade.ir](http://www.upgreengrade.ir))

#### About Company:

UPGREENGRADE consulting team has been founded in 2015 where it aims to educate the students and researchers in the field of sustainability and high-performance buildings in the first instance, and secondly, assist architects and clients to design energy-efficient buildings according to Iran's national building codes.

#### My Responsibilities:

- Researching on new methods for delivering sustainable solutions and insights
- Energy and daylight modelling of different design scenarios and their impacts on energy and daylighting performance in office and residential buildings
- Optimizing the initial design variables and target-based form-finding
- Calculating potentials of renewable energy sources like solar panel installations
- Collaborating with mechanical and electrical engineers for sizing air-conditioning systems and lighting
- Thermal bridging calculations and modelling
- Developing construction details of facade in terms of insulation, thermal bridges, and condensation risks

#### Achievements:

- Co-founding the 1<sup>st</sup> national forum for architects and practitioners (<https://upgreengrade.ir/forum>)
- Delivering optimum positions of the building mass with respect to the project demands
- Energy modelling of multiple ESD projects, including: 2-storey primary school building (18 classes), SADR international hotel, high-rise office building of Iranian Oil Company, Istanbul residential building
- Delivering well-daylit and glare-free environments in projects through shading systems
- Online teaching of energy and daylight simulation tools, including: EnergyPlus, Grasshopper plugins (Ladybug, Honeybee, and DIVA), Energy Management System, and Design Builder.
- Sustainable and energy-efficient design of a 24-storey residential building through:
  - Optimizing the building mass with regards to solar radiation studies,
  - Finding the optimum window-to-wall ratio, construction details and shading systems to enhance both daylight penetrations and energy-efficiency,
  - Detailed energy modelling and simulation,
  - Daylight simulations based on sDA, ASE and DF factors,
  - Thermal bridging calculations and condensation risk analysis,
  - Improving the energy performance by 20% comparing to the ASHRAE 90.1 (2010) baseline model

2012-2016 **Remote Architectural Designer**, NOMEL TOOS Executive Firm, Mashhad, Iran

Responsibilities:

- Facade design and delivering construction details
- Collaborating with structural and mechanical engineers
- Delivering architectural layouts from conceptual sketches to construction details
- Checking and editing drawings through a back-and-forth approach with structural and mechanical engineers.

2011-2012 **Architectural Assistant**, FARADID Architectural Group, Mashhad, Iran

Responsibilities:

- Interior designing and three-dimensional renderings
- Facade design and material selections

## **Awards and Honors**

2021 **Annual Research Day Award (Deakin University)**

2021 **Graham Treloar Research Prize (Deakin University)**

As the best Higher Degree by Research student with publications in relation to embodied energy and sustainability in 2020

2021 **Early Career Research (ECR) Performance Support Fund (Deakin University)**

Publishing two Q1 cross-disciplinary publications in 2021 | Fund: AU\$1000

2018 **HDR Scholarship Winner for Doctoral Studies at Deakin University (DUPRS)**

2018 **Nearly-zero Energy Building Design – ZEB National Award, Iran**

Awarded 1<sup>st</sup> Prize | Amount: IR Rls. 15,000,000

<https://www.youtube.com/watch?v=3ls2PCik9kI>

2012 **Silver Scholarship Winner for Master Studies (Milan Polytechnic University)**

## **International Collaborations**

### **1. Subject: International Building Performance Simulation Association of IRAN (IBPSA-Iran)**

(<http://ibpsa.sbu.ac.ir/>)

- Collaboration with researchers including Dr. Zahra S. Zomorodian (Shahid Beheshti University, Iran), Dr. Mohammad Tahsildoost (Shahid Beheshti University, Iran), Dr. Mahdiah Abravesh (University of Tehran, Iran), and Dr. Mojtaba Mahdavinia (Tehran University of Art, Iran).

#### **Achievements:**

- Committee Member
- Active collaborations within education, training, and research scopes

- **Details:** IBPSA-Iran was launched with the help of eight researchers across Iran including myself as the only overseas Iranian member and achieved the Iranian regional affiliate of the worldwide acting as *International Building Performance Simulation Association* ([www.ibpsa.org](http://www.ibpsa.org)). This association is linked to this association but acts as an independent organization which is launched recently and will start its activity by registering new members worldwide.

2. **Subject: International Energy Agency's Energy in Buildings and Communications (IEA-EBC) – Annex 79** (<https://annex79.iea-ebc.org/>)
  - Collaboration with high scholars and well-reputed researchers including Dr. William O'brien (Carlton University, Canada), Dr. Farhang Tahmasebi (University College London), Dr. Tianzhen Hong (Lawrence Berkeley National Lab, USA), and Dr. Julia Day (Washington State University, USA).
  - Achievements:
    - Presenting the PhD research in the 6<sup>th</sup> international symposium virtually in Denmark
    - Active contributor to three chapters of an open-source book entitled “Occupant-centric Simulation-aided Building Design” <https://doi.org/10.1201/9781003176985>
    - Publishing four high-quality review and research papers as part of the Annex activities
  - Details: Annex 79 conducts research studies focusing on “Occupant-centric Building Design and Operation” in four sub-tasks in which my activities are contributing to the 3<sup>rd</sup> sub-task entitled “Applying Occupant Behavior Models in Performance-based Design Process” to achieve high performance buildings
3. **Subject: International Energy Agency's Energy in Buildings and Communications (IEA-EBC) – Annex 87** (<https://annex87.iea-ebc.org/>)
  - Collaboration with Dr. Ongun Berk Kazanei, and Dr. Bjarne Olesen as annex operating agents from Technical University of Denmark
  - Achievements:
    - Participating in two workshops to prepare the annex proposal and subtask activities
    - Active participant in Subtask B and D
  - Details: Annex 87 conducts research studies focusing on “Energy and Indoor Environmental Quality Performance of Personalized Environmental Control Systems” in five sub-tasks in which my activities are contributing to the sub-task D entitled “IEQ and Energy Performance Evaluation” to assist developing new methodologies for modelling PECS in dynamic building simulations for performance evaluations

## **Registered US Patent**

<https://patents.google.com/patent/US20180216399A1/en?inventor=Seyed+Amir+Tabadkani>

### **Smart Transformable Shading System Based on Different Climates**

**Publisher:** The United States Patent and Trademark Office (USPTO)

**Application NO.:** US20180216399A1

**Fund:** Grant Award of US\$9,500 by ‘The Organization of Support Fund of Technology and Researchers’, The Iranian Presidency

### **INNOVATION:**

Building envelope should be responsive to short-time weather changes and requires to be an adaptive interface as the main building interface within indoors and outdoors. This invention represents a new three-dimensional shading system that could be shaped in hundreds different functional configurations in a modular format on a building façade where it can act as a high-performance and smart interface. This system can potentially deliver an acceptable indoor thermal and visual environment for occupants while reducing the building energy consumption.

## Presentations

### International

**Presentation** | 6<sup>th</sup> International Symposium on Occupant Behavior (IEA-EBC Annex 79)  
**Australia**

**2020**

**Presentation** | HDR Research Day, School of Architecture and Built Environment, Deakin University, **2021**  
**Selected Key Speaker** | “Sustainable Research Showcase” (Australian Institute of Architects) **2021**  
<https://members.architecture.com.au/EventDetail?EventKey=CPD210528>

## Iran

**Lecturer** | Binaloud Institute of Higher Education, Mashhad, Iran **[2016 - 2017]**  
*Unit: “Climatic Conditions Control & Environmental Conditions Control”*  
**Presentation** | Ferdowsi University of Mashhad, Iran **2018**  
*Topic: ‘The role of simulators in building energy management decisions’ (2 hours)*  
**Presentation** | Niroo Research Institute (NRI) Ministry of Energy, Iran **2017**  
*Topic: ‘The role of simulators in building energy management decisions’ (2 hours)*  
**Presentation** | Khavaran University of Mashhad, Iran **2016**  
*Topic: ‘An introduction to building energy simulation tools’ (2 hours)*
